ARTIFICIAL GRASS MAINTENANCE

Our dedicated team with over 20 years industry experience installing, rejuvenating and maintaining all types of synthetic sports surfaces, play areas and commercial space.

INSTALLATION & MAINTENANCE FOR SPORTS

Tennis

We recommend annual deep cleaning programme and regular chemical treatments.

We offer a full tennis court re-lining, re-painting, binding and resurfacing service that will guarantee your hard court retains a long lasting, high quality finish.

Athletics

Athletic tracks including long jump, triple jumps and javelin areas use a porous base of rubber granules in a two-part polyurethane resin.

We offer a full range of services for running tracks / athletic tracks and ancillary areas including; running track/athletics track cleaning, chemical treatment, re-lining, re-surfacing and repairs.

Football & Rugby

Artificial surfaces are becoming increasingly popular for these sports and are now FIFA & the FA, IRB and RFU approved.

We offer a full cleaning and maintenance program for 3rd generation and 4th generation football/rugby surfaces including infill top up, chemical treatment, part and full rejuvenation and repairs.

Cricket

Artificial wickets and nets offer players a hard-wearing all-year-round surface.

We offer a wide range of artificial wicket and artificial turf net cleaning, maintenance, repairs, rejuvenation, relaying and construction. Using high quality, British made carpets, shock pads and nets we can breathe new life into your facility with a partial or full refurbishment.

We treat 3G and 4G football and rugby pitches, all sand filled and sand dressed surfaces, macadam and acrylic tennis surfaces, M.U.G.A and athletics tracks, cricket practice nets, wickets and all synthetic sports surfaces.

FOR COMMERCIAL SPACES

Golf

Golf greens can be designed to exact specifications, with 'rough' areas, undulations and numerous holes included.

Artificial Grass Cambridge work with the leading synthetic sport grass manufacturers including TigerTurf® and Desso® and are able to offer solutions to suit all sizes and budgets.

Hockey

Regular maintenance, cleaning, part rejuvenation, full rejuvenation, re-lining and repairs

We offer Hockey pitch regular maintenance, cleaning, part rejuvenation, full rejuvenation, re-lining and repairs for sand based and sand dressed surfaces. Also cleaning, maintenance, chemical treatments, rejuvenation and repairs for water-based surfaces.

We transform outdoor areas from nurseries, schools and commercial spaces using only high quality UK and European made grass. Our additional services include roof cleaning.

All our work comes with a 15 year commercial warranty and the artificial grass that we install comes with a limited 10 year guarantee to give you real peace of mind.

Play Areas

With artificial grass you can offer outdoor play to the children throughout the year.

Many schools and nurseries have benefited from our artificial grass installations. Areas that were previously unusable due to mud or hard concrete have been given a new lease of life, offering the children a great, multi functioning, fun surface for learning and play. With artificial grass you can offer outdoor play to the children throughout the year.

Office

The perfect solution for commercial spaces, transform your commercial business outdoor space and benefit from minimal maintenance requirements.

SAND FILLED/SAND DRESSED SURFACES

Sand filled and sand dressed surfaces are extremely popular for club/community level and for schools. They offer a fast game with 'even' cushioning for the ball. They are ideal for hockey, tennis, netball and football. Without maintenance the area can become contaminated and compacted leading to a slippery, dangerous surface that is prone to flooding.

3G/4G RUBBER INFILLED SURFACES

3rd and 4th generation surfaces are a longer pile (40-60mm) with a rubber granulate infill and are commonly known as 3G or 4G pitches. 3G and 4G surfaces are ideal for football and rugby. Without a maintenance programme and left untreated, 3G and 4G pitches can become very compacted and contaminated leading to a slippery, dangerous surface that will flood easily.

Regular Maintenance

A regular, professional maintenance programme will extend the life of your surface by as much as 50%. Includes: Drag Brushing, Intensive de-compaction, Power Brushing, Infill Top Ups, Chemical Treatments, Infill Filtration.

Seam and Patch Repairs

Over time seams and joints fail, these can cause trip hazards and make surfaces unsafe for play. Seams can be replaced and worn areas can be patched and graded.

Line Marking

Over marking worn-out lines or adding extra sports lines to your surface. Our 2 part paint is durable and long lasting. All paint products are made from the highest quality acrylic and polyurethane materials which are tested to ensure durability.

MACADAM (TARMAC) HARD COURT/MULTI USE

Hard Tennis courts and multi use games areas (MUGAs) can be made of porous macadam (Tarmac). Without proper maintenance, moss, mould, leaf & stick debris and bird droppings contaminate the surface and eat into the macadam. This leads to the Tarmac breaking up, which makes holes and loose stone becomes present leading to a dangerous area.

Regular Maintenance

A regular, professional maintenance programme will extend the life of your surface by as much as 50%. Includes: Drag brushing, De-compaction, Power brushing, Infill Top ups, Chemical Treatments, Infill Filtration.

Seam and Patch Repairs

Over time seams and joints fail, these can cause trip hazards and make surfaces unsafe for play. Seams can be replaced and worn areas can be patched.

Line Marking

Over marking worn-out lines or adding extra sports lines to your surface. Our 2 part paint is durable and long lasting. All paint products are made from the highest quality acrylic and polyurethane materials which are tested to ensure durability.

Part/Full Surface Rejuvenation

Is there standing water and muddy patches appearing on your surface especially after rain? This usually indicates contaminated infill is slowing down the drainage of your surface. We remove part/all contaminated infill easing the flow of standing water.

Seasonal works: Summer rejuvenation (Dry weather is required)

Includes: Intensive de-compaction, infill filtration with a fine filter to remove contamination such as hair, skin, dust and carpet fibre. These contaminants are vacuumed from the surface; their removal aids and improves drainage.

Winter Rejuvenation

Without the correct maintenance regime in place, contaminants such as leaf fall can build up within your

Part/Full Surface Rejuvenation

Is there standing water and muddy patches appearing on your surface especially after rain? This usually indicates contaminated infill is slowing down the drainage of your surface. We remove part/all contaminated infill easing the flow of standing water.

Seasonal works: Summer rejuvenation (Dry weather is required)

Includes: Intensive de-compaction, infill filtration with a fine filter to remove contamination such as hair, skin, dust and carpet fibre. These contaminants are vacuumed from the surface; their removal aids and improves pitch/court performance and drainage.

Winter Rejuvenation

Developed to radically improve pitch drainage. Without the

Intensive Court/MUGA Maintenance

Using specialist pressure washing equipment developed specifically for delicate sports surfaces.

Chemical Treatment

Moss, mould and algae easily takes hold on a porous surface; left untreated the Macadam breaks up and needs replacement. Weeds can also penetrate tarmac if left untreated. Regular chemical treatments stop growth of moss, mould, algae and weeds and will keep your surface in the best playing condition.

Tennis Court Maintenance and Repairs

Damage from frost, tree roots, weeds, moss, or acidic bird droppings can leave sections of porous Macadam needing replacement. We are able to cut out areas of damaged Macadam, re-patch and if necessary, re-paint.

Tennis Court Maintenance line marking

We are able to over mark worn-out lines or add extra sports lines to your surface. Our 2 part paint is durable and long lasting. All paint products are made from the highest quality acrylic and polyurethane materials which are tested to ensure durability.

Tennis/MUGA Court Re-painting of the Whole Surface

We are able to repaint the entire court area including all lines. All paint products are made from the highest quality acrylic materials which are frequently tested to ensure durability and the right slip resistance.

Tennis Court Cleaning and Re-painting and Re-binding (to improve performance of older surfaces)

Surface binder adheres the aggregate of the macadam and can breathe new life into heavily worn or moss-damaged

ACRYLIC HARD COURT

The best of non-cushioned tennis surfaces, acrylic surfaces are prone to cracking and drainage issues due to the UK climate. A non-porous surface, which can sit in water for much of the year, it requires a good regular maintenance programme to ensure it does not become contaminated with mould, moss and algae.

POLYMERIC RUBBER

This surface is most commonly used for running tracks and Multi Use Games Areas (MUGA's) and is made up of a porous base of rubber granules in a two part polyurethane resin. The surfaces are prone to contamination from moss, mould and algae and can become slippery and dangerous if left un-maintained.

Intensive Maintenance and Cleaning

We use specialist pressure washing equipment developed specifically for delicate sports surfaces to deep clean the surface of your running track or multi use games area.

Chemical Treatment

To kill moss, mould, algae and remove weeds from the surface and ensure your running track /MUGA stays slip free and safe.

Repairs

Damage can be caused by studs and the movement of equipment. Sections of polymeric rubber can be taken out, replaced and re-sprayed. For smaller repairs a DIY rubber repair kit is available from our shop.

WATER BASED

Used exclusively for high level hockey offering a very fast play; some newer pitches can be played without water for practice and club games. Typical pile height is 18-20mm. Without a regular program of maintenance this kind of surface can become extremely contaminated with moss and live algae; this leads to a slippery, dangerous surface.

Intensive Maintenance and Cleaning

We use specialist pressure washing equipment developed specifically for delicate sports surfaces.

Repairs

The UK climate can be very hard on Acrylic surfaces. By nature they are non-porous so often sit in water, frost, ice and snow which can cause surface cracking and movement around drains. We can repair the surface with a colour matched acrylic binder that will leave the pitch feeling and looking as good as new.

Re-lining

Moss, mould and algae easily takes hold on a porous surface; left untreated the Macadam breaks up and needs replacement. Weeds can also penetrate tarmac if left untreated. Regular chemical treatments stop growth of moss, mould, algae and weeds and will keep your surface in the best playing condition. Contaminants such as leaf fall can build up within your surface and stop it draining or leave it draining very slowly leaving deposits of silt on the surface. These areas can be radically improved by our winter rejuvenation allowing your surface to drain far more easily.

Re-lining

We can over mark worn out lines or add extra sports lines to your surface. Our 2 part paint is durable and long lasting. All paint products are made from the highest quality acrylic and polyurethane materials which are tested to ensure durability.

Pitch Cleaning & Chemical Treatment

To kill and prevent moss, mould, algae and remove weeds from the surface.

Part/Full Surface Rejuvenation

Using our specialist intensive cleaning process.

Seam and Patch Repairs

Over time seams and joints fail, these can cause trip hazards and make surfaces unsafe for play.

Seams can be replaced and worn areas can be patched and graded.

Line Marking

Over marking worn-out lines or adding extra sports lines to your surface. Our 2 part paint is durable and long lasting. All paint products are made from the highest quality acrylic and polyurethane materials which are tested to ensure durability.
