

## FOOTBALL & RUGBY CLEANING, MAINTENANCE & INSTALLATION

**We offer a full cleaning and maintenance program for 3rd generation and 4th generation football/rugby surfaces including infill top up, chemical treatment, part and full rejuvenation and repairs.**

### **3G & 4G SURFACES**

These surfaces are longer pile (40-60mm) with a rubber granulate infill and are known as 3rd Generation (3G) or 4th generation (4G). Left untreated, these surfaces can become very compacted and contaminated leading to a slippery, dangerous surface that will flood easily.

#### **Regular Pitch Maintenance**

A regular maintenance programme is recommended from new with a periodic part rejuvenation. In the majority of cases this will allow your surface to outlast manufacturers warranties by as much as 50% and ensure good playability throughout the year.

#### **Part Rejuvenation**

Part/Full rejuvenation involves replacement of infill and will ensure improved drainage and playing performance. Ideal for previously unmaintained or older surfaces.

#### **Re-lining**

We offer a full and comprehensive re-lining service using two pack polyurethane paints to ensure a long lasting, high quality finish.
