

## TENNIS COURT CLEANING, MAINTENANCE & INSTALLATION

**We recommend annual deep cleaning programme and regular chemical treatments. We offer a full tennis court re-lining, re-painting, binding and resurfacing service that will guarantee your hard court retains a long lasting, high quality finish.**

### **HARD/MACADAM**

These tennis courts are made of porous macadam (Tarmac) and are the most popular form of hard court. Moss and mould contaminate the macadam, leading to the surface breaking up and loose stone being present causing a slip hazard and ugly holes.

#### **Regular Court Maintenance**

Annual deep cleaning programme and regular chemical treatments. Re-painting/re-binding recommended every 5 years.

#### **Court re-painting**

We offer a full tennis court re-lining, re-painting, binding and resurfacing service that will guarantee your hard court retains a long lasting, high quality finish.

### **SAND FILLED AND SAND DRESSED**

Artificial grass tennis courts are popular for private owners, club/community level and schools. Typical pile height is 18-24mm and

the surface is either filled or dressed with fine silica sand.

#### **Regular Court Maintenance**

A Regular maintenance programme for artificial grass tennis courts twice per year and a regular chemical treatment is recommended from new; with periodic part rejuvenations. This in most cases will allow your surface to outlast manufacturers warranties by as much as 50% and ensures good playability throughout the year.

#### **Full & Part Rejuvenation**

Part/Full rejuvenations involve replacement of infill and will ensure improved drainage and playing performance. Ideal for previously unmaintained or older surfaces.

#### **Court re-painting**

Using two pack polyurethane paints we can re-line or add new lines to your tennis or multi-use games area including Netball, 5/7- a-side football, hockey 'D's or mini hockey.
